

WWW.PARALDA.COM

The *new way* of *Collaboration*, *Communication* and *Archiving* in one *single solution*.

## INTEGRATION

Paralda allows you to mail, archive, follow up actions (CRM), tasks or making appointments and much more. Paralda is designed to be fully compatible with any existing software through proprietary connectors that allow seamless interaction.

## SIMPLICITY

Paralda information systems automatically archive emails and all needed company information per client without the use of folders. This unique feature of Paralda creates structure in data storage, improving transparency and archives of company information to obtain a better overview about the affairs in your company.

## RELIABILITY

Paralda has been used with great success globally for a decade. Companies which have been using Paralda have benefited from the construction of a conclusive company wide data archive, and being able to collaborate more efficiently.

## FLEXIBILITY

Paralda is "customer centric" and is fully scalable and can be custom designed to meet your specifications. Paralda is simple to use and understandable, and only a brief learning process for users is required. Paralda software is compatible with Windows, Apple- Linux workstations.

*"Sensitive company information is in the hands of only **one** of your employees..."*

Is this how your business wants critical information to be kept, or is this a technical **concession** ?..

**PARALDA** <sup>BV</sup>

“Each day, everybody must **manually drag** each Email message to its correct folder...”

Is this still a **viable solution**, or is it much more **efficient** to **archive** all Email **automatically** ?..

Paralda uses a new concept regarding processing company information, and the realization of this concept has been one of the major challenges concerning the development of our proprietary software. In theory Paralda does not have a data storage limit. With this virtually unlimited capacity, company information archival is guaranteed. For example; an Email which has been sent one minute ago somewhere within the organization becomes directly available in Paralda to be viewed by the rest of the company. This software system assures a transparent ‘customer centric’ access to needed information.

“Our company has generated **terabytes of data** in the last years...”

**Where** and how do we **find** specific data ?..

**SPECIFICATIONS:**

\* Tested & Certified by Paralda B.V.
